Project Title: Worker Management System for Garments Factory

Platform: Web-based (Developed using Django Framework)

Prepared by: Forhath Hosain Ome

Date: [Add Date]

1. Introduction

1.1 Purpose:

To develop a web-based Worker Management System to streamline worker operations including attendance, shift scheduling, payroll, and performance tracking.

1.2 Scope:

System will support admin and limited roles such as complaints officers. Key features include daily check-in/out, auto salary calculation, performance management, etc.

1.3 Technologies:

- Backend: Django (Python)
- Frontend: HTML, CSS, Bootstrap, JavaScript
- Database: PostgreSQL / MySQL

2. Functional Requirements

- Admin Panel
- Attendance System (Daily check-in/out)
- Leave Management
- Performance Management
- Payroll Management (Shift based salary calculation)
- Task Assignment
- Department Management
- Complaints System
- Reporting (Attendance, Payroll, Performance)

3. Non-Functional Requirements

- Secure login-based access
- Role-based permission system
- Data integrity and backups
- Responsive design

4. User Roles

- Admin: Full control over all modules
- Complaints Officer: Limited access to complaint-related data
- Special Audit User: Upon login, system re-clusters default data into personalized views and audit dashboards

5. Data Flow Diagram (Level 0)

DFD will be included as an image.

6. ER Diagram

ER diagram of entities like Worker, Department, Attendance, Shift, etc., will be included as an image.

7. Modules Overview

Module	Description
-----	-----
Worker Mgmt	Add/edit worker info
Attendance Mgmt	Daily attendance, reports
Shift Scheduler	Manage worker shifts
Leave Mgmt	Manage worker leaves
Performance Tracker	Monthly performance records
Task Management	Assign and monitor tasks
Payroll Calculator	Auto salary calculation
Complaints Handling	Complaints view (role-based)
Reports	Attendance, salary, performance
Audit Dashboard	Special views for audit user

8. Future Scope

- Mobile App support
- QR/Biometric integration
- Multi-language support
- Graphical analytics for performance
